# ID LAYOUT PROPOSED MODIFICATIONS

An online archive of this document can be downloaded at the following link:
https://klik-a-snap.github.io/LCNHS/22/11/11/ILPM-rev2.pdf

Hereunder tackles proposed modifications to the ID layout, and their corresponding rationale.

➢ Shrunked school building picture, and lighten its yellow color overlay. This is to give more space to the important fields below, and as it is subjectively more pleasing to the eyes.

➢ Added School's physical address, electronic mail address, and contact number in the header. This is due to the requirement set and agreed upon in the signed service contract.

➢ Subtitle "Junior High School" or "Senior High School" is moved just below the header, changed its font to a thick one, its color to dark sludge green, and placed an opaque, white rectangle in its back. This is as the said subtitle is small, and has poor contrast relative to the background.

➢ The above modifications allowed for the student's picture and QR code to be enlarged. This is done to address reliability issues and machine-readability of the said QR code when it is smaller than 1" x 1". Enlargement of the student's picture is also done to balance the layout of the identification card.

➢ We also see it fit to move the LRN just below the QR code, as we do not deem the LRN to be important enough that it is larger and more emphasized than the student's name.

➢ The font used for the student's name is changed to a thin one, as it can allow for more characters per line without compromising said text's overall size and readability.

➢ Lastly, almost all of the above said modifications allowed for the student's signature field to be enlarged. This is done as the identification card can be used for authentication and as a requirement for legal papers, and thus, requires a bigger field.

There are no modifications done to the back of the identification card. However, this is subject to change.

JUNIOR HIGH SCHOOL
